 CHECKBOX

Star Wars planet guide

This project is based on a public API available at https://swapi.co/

You are free to use any libraries to complete this project. Only React.js is compulsory. We would recommend you use:

- Bootstrap or Material-UI
- Axios
- Create-React-App boilerplate

We would prefer you to create this on a public repository on github.

Project aim

To allow Star Wars fans to browse and learn about the different planets in the Star Wars EU

Requirements & User stories

1. The main page must contain a table with all the planets available in the galaxy

2. The table must include the planets' name, population and terrain details

3. As a user, I can sort the planets by name and/or population

4. As a user, I can filter planets by name

Evaluation

We want to see how quickly and effectively you are able to understand requirements, pick up a new language or technology and deliver what is required, while writing clean and maintainable code.
